

# Sesa Pure

## Boil Notice Tips & Tricks

- For Wholesale Customers -

### 1. Water Filtration

- Do not rely on any commercial filter (except for a properly maintained Reverse Osmosis or Absolute 1 Micron Filter) to properly and safely remove viruses, bacteria, and protozoa.
- The water is clear and has no signs of contamination yet, but treat this advisory as a serious issue.

### 2. Ice Tea

- Do not use any brewer that is connected to the City of Austin water supply.
- Customers still want iced tea, of course. There is an easy process that we use regularly and high-volume operations use as well.
- Our recommended method:
  - Boil 3 gallons of water. Once it boils it is safe.
  - For best treatment for the tea product, use water around 185F. (meaning the water can sit for a few minutes after boil)
  - Put a 3oz / 3-gallon Sesa Ice Tea brew pack into large sanitized beverage container with spigot along with the 3 gallons of boiled water.
  - Let the brew pack sit for 15-20 minutes for a strong brew, or 10 minutes for a lighter brew.
  - To remove the brew pack, **BE CAREFUL & BE GENTLE! ANY METAL TONGS MAY BREAK THE PAPER AND TEA LEAVES WILL BE IN THE BREW**
  - Be careful using metal to stir the brew pack as it may also break the bag.
  - Use a strainer or soft device to remove the brew bag.
  - Treat any beverage as you would food. Do not touch with bare hands. Do NOT use water pitchers to dip inside.

---Again, treat any beverage as required by food code regarding contact and sanitation.

### 3. Hot Tea

-As your hot water serving is already set above 158F, all hot tea service is safe.

### 4. Ice

-We know that you have already dealt with this. We feel your pain.

-We suggest / require that any cold beverage is served with the proper water filtration / sanitation and sourcing.

### 5. Coffee

-If you are a drip coffee customer, we require that you stop service as the temperature and sanitization of water cannot be guaranteed.

-If you use our French Press product, normal process can continue since water served has followed the process already.

-If you use our espresso product, we require that you follow your policies on water safety.

**Drink Different. Drink Better.**
